For our customer, British company, multi award-winning team whose technology powers viewer interaction at UK's leading broadcasters such as ITV, the BBC, Channel 4 and Channel 5 on most popular TV shows, we are looking for:

DevOps Engineer
Location: Krakow

Responsibilities:
- maintain platform availability in accordance with company's SLAs (up to 99.99% during live events)
- ensuring company's systems are secure and auditable. Including meeting ISO27001 standards
- benchmarking company's systems against security best practice
- using orchestration and configuration management tools to maintain and configure systems
- developing custom / bespoke tooling
- managing multiple environments (production, staging and test/dev)

We expect:
- knowledge and experience of administering and securing Linux systems
- knowledge and experience of AWS components and services (in particular: CloudFormation and VPC)
- knowledge of Puppet (or similar configuration management tool)
- knowledge and experience of managing and administering databases (MySQL or PostgreSQL) and assessing their performance / suitability for real-time services

Desirable:
- experience with high traffic applications
- some experience of JavaScript and Node.JS
- experience working for a "big corporate" and ability to identify "best practice" from "bloated bureaucracy"

We offer:
- competitive salary
- opportunities to attend official AWS training courses, in addition to English lessons
- potential to join company's share ownership scheme
- flexible working hours and days, which allows some working from home if required by the employee
- company paid office fund for employees to use for weekend holidays, extra activities and nights out
- lots of banter over food; coffee; and maybe the odd beer in other words, great atmosphere
